A BREAKTHROUGH IN PAIN MANAGEMENT TREATMENT

*Treatment for Pain, Circulation &
Neuromuscular Rehabilitation*

➔ **SAFE**

➔ **EFFECTIVE**

➔ **NON-PHARMACEUTICAL** ➔ **NON-INVASIVE**

The FDA-cleared RST- SANEXAS neoGEN-Series®, a highly advanced, electric cell-signaling device, helps increase circulation, reduce inflammation, stimulate nerve fibers, and improve healing.

This new and exciting quantum-based medical treatment utilizes a sophisticated and painless electro-energy wave generator. It directly signals nerve cells with electronic impulses, instead of smothering them with drugs. It's been proven to provide permanent relief. Think of it like a piano tuner striking his tuning fork next to your piano to tune it. The piano strings will vibrate when it is correctly tuned to the right frequency. This is how the electrical impulses sent from the neoGEN® device affect your nerve cells, so they can regrow and start the healing process. The treatment is not painful; it's comfortable and non-invasive. The typical treatment lasts 15-30 minutes per session and is recommended 2-3 times per week, depending on your condition and your prescribed protocol.

Patient undergoes electric cell-signaling treatment using neoGEN-Series® device to increase circulation, stimulate nerve fibers, reduce inflammation, and improve healing.
